

Siberian PWA BackOffice Module

PWA BackOffice Module will help you to manage your PWAs.

Here you can activate/de-activate the access of PWA Creator Editor Module for your users and can configure custom domain for your PWA. You will find a list of your activated & published PWAs.

After installation of a module, you can access it from your **Siberian BackOffice > Manage > Modules > PWA Backoffice**.

Delete Published PWA

Don't put any blank spaces at the end.

Delete

By default, "Your app isn't activated for PWA" message will be shown to your editor users.

You can activate the access of PWA Creator Editor Module using two methods.

Method-1 PWA Activator using App URL Key

You can give access of PWA Creator Module for a specific app using the App URL Key.

Method-2 PWA Activator using User Email

You can allow your user to activate PWA themselves for their apps. Suppose any user has multiple apps and he wants PWAs for all his apps then you don't need to put App URL Key for all these apps. You can activate PWA access for this user using his email and user can activate PWA himself for all of his apps.

PWA Activator using App URL Key:

PWA Activator using App URL Key

List of your Activated PWAs

App URL Key	App Name
5e68bab7bd3a1	My Demo PWA
5f3a5055c84cd	My Test PWA
5eff24ab4cc0c	WebVista PWA

Deactivate PWA

PWA Activator using User Email:
