

Convert Siberian WebApp into Progressive Web App (PWA) using PWA Module

Siberian PWA Features:

- Add to Homescreen
- iPhone Install Pop-up
- Facebook PWA Pop-up
- Splash Screens
- Offline Page
- Web Share API Support
- Add-on: Web Push Notifications

More information regarding Siberian PWA available here: <https://webvista.co.in/siberian-pwa.html>

Our Siberian PWA System includes 3 Modules.

PWA BackOffice Module:

This module will help you to manage your Siberian PWAs.

- Activate & de-activate PWA Creator Editor Module access for users.
- PWA Activator & de-activator using App URL Key & User Email.
- List of Activated & Published PWAs.
- Custom Domain Activator & de-activator.

PWA Creator Editor Module:

This module will allow your editor users to generate & publish PWA themselves.

- PWA Details are stored in a database, so no need to re-input all fields while re-generating PWA.
- iPhone Install & Facebook PWA Pop-up customization options with live demo preview.
- Option to enable External PWA Push Sender Page with Password.
- Users can self Generate/re-generate & Publish/re-publish PWAs themselves.
- Default PWA Link with click-to-copy button & QR Code.
- Users (activated through PWA Activator using User Email) can self-activate PWA themselves.

PWA Push Module:

This module will enable Firebase Web Push Notification for Siberian PWA.

- PWA Push BackOffice Page to set-up Firebase Config & Server Key.
 - PWA Push Sender Editor Module to send PWA Push Notifications.
 - List of sent PWA Push Messages.
 - External PWA Push Sender Page.
-

How it works?

- (1) Activate PWA using PWA BackOffice Module.
 - (2) Users will fill PWA Details and Save data.
 - (3) Users will upload a PWA App Icon and Publish PWA.
-

Notes:

- We don't provide any customer billing in this module.
 - Users can't add custom domain, only Siberian Admin can add Custom Domain for PWA.
 - iOS Safari doesn't support PWA Web Push yet.
-
